Introduction

Across the political spectrum, Americans are moving toward a consensus that China’s authoritarian regime poses the foremost threat to U.S. national security. Under the firm control of the Chinese Communist Party (CCP), the People’s Republic of China presents a challenge that goes well beyond the military, or even the technological, domain. Beijing seeks to shape global architectures, and through them to assert global control. Beijing’s ambitions are evident in its efforts to set global technical standards and control emerging infrastructure, to convert foreign dependence on Chinese resources and manufacturing capabilities into market-making power, and to influence international opinion through disinformation and propaganda.

These efforts target the public and private sectors. And in its efforts to influence governments, including the U.S. government, Beijing does not limit itself to the national level. Beijing also runs systematic campaigns to influence subnational — that is, state and local — governments.

Beijing understands that subnational political leaders respond to different incentives than do federal officials and authorities — and that those incentives may create favorable conditions for China’s influence campaigns. States and localities often prioritize the creation of jobs and economic growth, with less concern for national security risks. Beijing appeals to such economic interests to shift attitudes, open doors for China and Chinese entities, and foster relationships that can offset growing resistance in Washington to Beijing’s global agenda. Success on this score brings strategic and security returns for the CCP. It also obscures the extent to which short-term boons from economic cooperation may lead to long-term losses for the United States by hollowing out key industrial sectors and gradually offshoring jobs and economic growth.

In June 2019, the Minzhi International Research Institute, a Chinese think tank, and Tsinghua University’s Center of Globalization Studies published a survey of U.S. governors’ attitudes toward China. The report clearly articulates the logic of cultivating state and local officials as a counterweight to Washington’s increasing concern about China’s national security threat:

In Washington, voices advocating a tough stance on China seem to have become mainstream and have growing momentum. [However,] in American politics, in addition to the White House and Congress, there is another type of decisive actor: the governors. Because of the federal system in the United States, governors can ignore the White House’s orders… And each federal member enjoys a certain degree of diplomatic independence… Therefore, as Washington’s overall attitude towards China toughens, the attitudes of the states are crucial.

Based on public statements, the Minzhi-Tsinghua survey finds that “among the 50 governors, 17 are friendly to China, 14 have ambiguous attitudes toward China, six are tough on China, and 14 have made no clear or public statement on China.” The report argues that “hardline” stances among U.S. governors are overwhelmingly human rights-related “and rarely involve economic and trade issues.”

1. Minzhi focuses on globalization and free trade, the U.S.-China balance of power, and global economic rules. Its founder, Chen Mingjian, described its purpose in 2017: “The United Front is the new force of non-governmental diplomacy. Think tanks are an important form of expression in the process of the United Front’s globalization. The establishment of think tanks in China needs to have think tank platforms to communicate with the RAND Corporation, the Hoover Institution, and the Brookings Institution.” "陈明键：‘全球化大统战’的纵横家 [Chen Mingjian: A Strategist of the ‘Global United Front’],” International Student Magazine (China), March 13, 2017.
2. “美国对华态度全景 - 州长篇 [A Panoramic View of U.S. Attitudes Toward China-Governor’s Article],” Minzhi International Research Institute and Center of Globalization Studies, June 22, 2019. This report was the first in a larger series called “Overview of U.S. Attitudes toward China.” For more information on Minzhi and Tsinghua, see the appendix.
The Chinese subnational influence campaigns, and the apparatus implementing them, are longstanding. Yet until recently, China’s efforts mostly flew under the radar of U.S. federal policymakers — or were mistaken for a benign effort to promote greater cooperation with individual states. As a result, the federal government supported some of the most direct manifestations of China’s influence.

4. For full lists, see the appendix.
5. To an extent, this may be a function of mirror-imaging the Chinese system: Chinese provinces play a core economic role; the People’s Republic of China assumes that U.S. states do as well. Moreover, in China, political leaders follow a direct path from subnational-level to national-level posts.
This report does not provide an exhaustive inventory of Beijing’s initiatives to shape state and local opinion. Rather, it emphasizes mechanisms under the direction of the CCP that present themselves as apolitical means of promoting dialogue, coordination, and understanding. As such, this report does not examine the role of Chinese consulates, which openly advertise themselves as official Foreign Ministry vehicles, or commercial mechanisms of influence that might be influenced by government policy, such as foreign investment or tourism. Nor does this report seek to measure the impact of Chinese subnational influence initiatives or to compare China’s approach to those of other foreign governments. Instead, it aims to elucidate the strategic goals guiding Beijing’s subnational influence operations, as well as the tools and mechanisms Beijing employs. This report also suggests indicators for assessing where those operations are likely to have the greatest effect in the United States.

Not all features of PRC engagement in the United States are malign or manipulative. Not all mechanisms of cooperation, dialogue, and understanding between the United States and China constitute fronts for government influence campaigns. However, understanding the range of mechanisms for subnational partnerships that the CCP deploys is a necessary precursor to identifying where and when threats may exist.

This monograph begins with a brief survey of Chinese discourse on subnational influence efforts, as well as the bureaucracy guiding them. The report first documents Chinese leader Xi Jinping’s 2015 visit to Seattle as an example of the strategic orientation, sprawling objectives, and diverse tools that define Beijing’s influence campaigns within the United States. It then examines the Chinese People’s Association for Friendship with Foreign Countries (CPAFFC) and its activities in the United States, including the China-U.S. Governors Forum. Afterward, it turns to non-CPAFFC mechanisms of subnational influence guided by the CCP. Finally, the monograph presents a notional set of indicators for assessing state-level vulnerability to China’s influence efforts.

Xi Goes to Seattle

In 2015, Xi Jinping visited the United States for the first time since becoming general secretary of the CCP. During his trip, Xi visited the White House and attended the 70th anniversary of the United Nations in New York. But he began his visit in neither Washington, DC, nor New York. Rather, on the morning of September 22, he landed in Seattle, where he attended the third China-U.S. Governors Forum.6

Xi’s Seattle visit reflects the sprawling objectives and mechanisms that define Beijing’s influence campaigns within the United States. Both entail close, transactional relationships with key players in the business, industrial, and technology sectors; courting of state and local officials; a prominent role for American non-governmental associations (whether commercially oriented, such as the U.S.-China Business Council, or with a more thematic mandate, such as the National Committee on United States-China Relations); and an emphasis on sister cities and other government-to-government programming.

China-U.S. Governors Forum

Xi spent most of his first day in Seattle at the third China-U.S. Governors Forum, attended also by Governors Jay Inslee of Washington, Jerry Brown of California, Terry Branstad of Iowa, Rick Snyder of Michigan, and Kate Brown of Oregon.7 In his address to the forum, Xi explained: “Without successful cooperation at the sub-national level, it would be very difficult to achieve practical results for cooperation at the national level. That is why I place great importance on China-U.S. sub-national...
cooperation.” Xi also pointed to the growth of sister-city and sister-state relationships as evidence of strengthening China-U.S. subnational ties: “Thirty-one Chinese provinces/regions/cities have established 43 sister province/state relations and 200 sister-city relations with 50 American states.” Xi then advertised the economic value of such ties to the governors in attendance:

Over the past 10 years, 42 American states have achieved triple-digit increases in their exports to China. According to statistics of the American side, Chinese investment to the U.S. over the past five years has expanded by over eight billion dollars on average every year and the pace is still getting faster. For the five American states represented here, China is among your top four export markets and a major source of international students.9

Xi proceeded to outline opportunities for further development of U.S.-China subnational relations. The United States was “welcome to actively participate in the ‘Belt and Road’ Initiative,” he said. The United States could also match its “technology and expertise” with “China’s market demand” in everything from industrialization and information technology (IT) development to urbanization and agricultural modernization. Xi offered concrete examples:

Iowa is known as the “granary of the U.S.” and Oregon is also a major agricultural producer. These two states can strengthen their cooperation with big agricultural producers like Shaanxi, Hebei and Heilongjiang provinces. California’s HP has set up a global computer production center in Chongqing, where further cooperation in the IT industry can be expected. Michigan, as the largest motor vehicles producer of the U.S., can also explore cooperation with China. In fact, Michigan may start with the six Chinese provinces and cities present today, as they all have a booming car industry. And the two sides can explore cooperation in a third market. 10

Xi emphasized that increased economic ties to China would deliver what American voters want most: jobs. “I know as governors, you are most concerned about employment. Cooperation in the above-mentioned areas will promote growth and create jobs, thus bringing benefits to our peoples.”11

How the governors at the forum responded to Xi’s pitch is unclear. Media coverage of the forum was pooled; participants met privately with Xi after the event. 12 However, there are indications that Xi’s message resonated. For example, just days after a meeting at the forum between Xi and Iowa Governor Terry Branstad, a Chinese delegation traveled to Iowa to sign over a dozen contracts for soybean and health

---

10. Ibid.

11. Ibid.

products. That trip and those contracts were likely planned before the forum. But Branstad’s enthusiasm was notable. “This,” Branstad said in an interview about the contracts, “builds upon a long line of experience that we have had together.”

Referencing the growing U.S.-China tensions over the South China Sea, cybersecurity, trade issues, and human rights, Branstad further noted that he respected “the fact that those issues have to be resolved at a national level. My role as a governor is to build those relationships, increase trade, and create more jobs in Iowa, those kinds of things.” Branstad’s comments reflect U.S. state and local leaders’ tendency to focus on economic growth at the expense of long-term development and security. Beijing’s influence efforts take advantage of this myopic perspective.

“Branstad’s comments reflect U.S. state and local leaders’ tendency to focus on economic growth at the expense of long-term development and security. Beijing’s influence efforts take advantage of this myopic perspective.”

Admittedly, Branstad’s language and attitude are not reflective of all governors, nor are they a result of his participation in the China-U.S. Governors Forum. Named ambassador to China in 2017, Branstad has known Xi for some 35 years and has described Xi as an “old friend.” They met while Xi was visiting Iowa for an agricultural tour as a local party leader.

Still, Branstad’s approach tracks with China’s political agenda and amplifies CCP influence.

Xi Means Business

Following the governors forum, Xi spent the evening of his first day in Seattle at an 800-person dinner for business executives, co-hosted by the U.S.-China Business Council, the National Committee on United States-China Relations, and the Washington State Welcoming Committee. Participants paid about $30,000 per table. Governor Jay Inslee delivered welcoming remarks, followed by a bipartisan cast of political and commercial heavyweights: the chair of the U.S.-China Business Council and Ford Motor Company’s CEO; then-U.S. Secretary of Commerce Penny Pritzker; the chair of the National Committee on United States-China Relations, Carla Hills, who served as U.S. trade representative under President George H.W. Bush; and former Secretary of State Henry Kissinger, who introduced Xi. Xi’s remarks that night constituted his only policy-focused speech during his state visit to the United States. The co-chairs

14. Ibid.

“During Xi’s visit, Boeing Chief Executive Dennis Muilenburg trumpeted China’s commitments to order 300 jets. Muilenburg did not mention that Boeing had recently agreed to move a 737 jet completion and delivery center as well as more parts work to China.”

Xi dedicated much of the next day to the business community. He attended talks hosted by the Paulson Institute, where U.S. and Chinese business leaders discussed market access. Xi stopped by the Microsoft-hosted U.S.-China Internet Industry Forum and visited Boeing’s local assembly line. 18 During Xi’s visit, Boeing Chief Executive Dennis Muilenburg trumpeted China’s commitments to order 300 jets. Muilenburg did not mention that Boeing had recently agreed to move a 737 jet completion and delivery center as well as more parts work to China. 19 Also during Xi’s visit, Boeing announced commitments to long-term strategic cooperation with China’s National Development and Reform Commission as well as the Aviation Industry Corp of China (AVIC). 20 The U.S. Department of Defense has since found that AVIC is linked to China’s military. 21

Xi also made less explicitly commercial stops in Washington state. He held a private gathering with members of the West Coast’s Chinese American community and visited Lincoln High School in Tacoma, the sister city of Fuzhou, Fujian. 22 The two cities formed their relationship when Xi was party chief of Fujian in 1984. On the morning of the 24th, Xi flew to Washington, DC. 23

“We will look back on [Xi’s visit] as a major milestone in relations between our two great countries, with Washington state once again playing a central role in fostering positive ties,” said Kristi Heim, executive director of the Washington State China Relations Council, after Xi’s departure. 24

---

22. The phrase “sister cities” refers to agreements between cities — or boroughs, towns, prefectures, regions, et cetera — designed to promote cultural and commercial ties.
All Politics Is Local

“There is a saying in American politics,” wrote Jia Zhongzheng of the Chinese Academy of Social Sciences in 2017, “that all politics is local.” He suggested that state and local governments were particularly amenable to China’s overtures. Chinese companies might circumvent federally imposed barriers to sensitive trade and foreign investment by working at the subnational level.25

Jia’s logic is widespread across Chinese academic discourse, and increasingly so as national-level tensions between Washington and Beijing escalate. Beijing sees subnational relationships first as means to influence U.S. economic, technological, and narrative environments, and second as means to increase China’s national-level influence in the United States. In the short term, subnational governments can exert pressure on the federal government. In the longer term, Beijing views subnational officials as future national leaders to be cultivated so they become favorably predisposed toward China.

In 2017, State Council Counselor Wang Huiyao and two of his colleagues at the Center for China and Globalization, a Beijing-based research organization that Wang founded, explained that U.S. state and local officials are more malleable and readily influenced than their national counterparts. “In some economically underdeveloped areas of the United States, some local officials have never even traveled abroad,” they wrote. Beijing can shape their attitudes through “track-two diplomatic platforms”—that is, exchanges that nominally involve only private individuals and organizations.26

In 2018, Liu Danning of the Party School of the CCP’s Jiangsu Provincial Committee published an article on China’s relationship with Jerry Brown, the governor of California from 2011 to 2018. Liu treated the Brown-China relationship as a case study reflecting the value of China’s subnational influence campaign. “More and more scholars have turned their attention to the international activities of subnational governments, and a parallel diplomacy has emerged from this,” Liu wrote. “The theory of parallel diplomacy … highlights the autonomy of regional, subnational governments as international actors.” Liu added that during Brown’s tenure as governor, he “had frequent interactions with Chinese national leaders. The two sides established a close relationship of friendship and mutual trust… Therefore, California became one of the states with the friendliest relations with China.”27

Chinese state media promote a similar view. An August 2019 headline from Xinhua News, the official PRC news agency and China’s biggest media outlet, reads: “Going against the wind: U.S. local governments actively seek cooperation with China.”28 The article states:

In mid-to-late August, the Kentucky Economic Development Agency will lead American entrepreneurs to China on a week-long business development trip. This is a microcosm of the fact that U.S. local governments are actively seeking cooperation opportunities and maintaining the

26. Li Junqiang and Zang Zhenrui, “基础设施建设是中美合作的关键点 [Infrastructure Construction Is a Key Point of Sino-US Cooperation],” Motherland (China), 2017. In addition to serving as president of the Center for China and Globalization (CCG), Wang’s other titles include honorable vice chairman of the China Association for International Economic Cooperation under the Ministry of Commerce, and vice chairman of the Western Returned Scholars Association under the UFWD. In the cited interview, his comments are recorded alongside those of Miao Lu and Tang Beijie, CCG’s co-founder and deputy secretary-general, respectively.

27. Liu Danning, “美国加州杰瑞·布朗时期对华外交研究 (2011-2018) [Research on the Diplomacy of California during the Jerry Brown Period (2011-2018)],” Jiangsu Provincial Party School of the Jiangsu Provincial Committee of the CCP, June 2020. This friendship was evident, for example, in “groundbreaking” cooperation between California and China’s Ministry of Science and Technology and China’s National Development and Reform Commission, among others, as well as in “the first Sino-U.S. joint working group on trade and investment cooperation between provinces and states.”

long-term development of bilateral relations despite
the escalating Sino-U.S. economic and trade friction.29

Why? The article explains that state and local
governments are “pragmatic” and “value the driving
role of U.S.-China relations on local employment and
economic development.”30

The Xinhua News article does not cover Beijing’s
deliberate efforts to encourage those “pragmatic”
attitudes and develop subnational influence. Yet such
efforts are part of China’s larger “United Front,” which
is both a strategy and an ecosystem of CCP-guided
or CCP-controlled groups charged with advancing
both the government’s domestic control and its
international influence.

The Central United Front Work Department (Central
UFWD) is the CCP department that manages most, but
not all, of the United Front’s work at home and abroad,
including its international influence operations.31
The Central UFWD reports directly to the Central
Committee of the CCP. The State Department has
described the United Front Work Department as “an
organ tasked with co-opting and neutralizing threats
to the party’s rule and spreading its influence and
propaganda overseas.”32 Accordingly, the Central UFWD
reportedly oversees so-called “re-education” programs
in Xinjiang and Tibet, technology transfer programs
with foreign counterparts, and efforts to influence the
Chinese diaspora.33 In addition to working through
the Central UFWD, the CCP also supports provincial
and local-level UFWDs.

The UFWD system guides and supports a broad
network of bureaucracies and institutions designed to
execute its mission. These include the Foreign Ministry
and the Overseas Chinese Affairs Office, the All-China
Federation of Industry and Commerce, and Confucius
Institutes.34 In 2018, the Central UFWD absorbed the
Overseas Chinese Affairs Office, an administrative office
previously subordinate to the State Council and charged
with engaging overseas and returning Chinese people.35

Much of Beijing’s United Front work at the state and
local level in the United States takes place through
the Chinese People’s Association for Friendship
with Foreign Countries, the lead organization for
relations with foreign local governments.36 Its role is
to advance China’s international ambitions through
channels other than formal diplomacy, focusing on
subnational foreign governments, political figures,
and nongovernmental organizations (NGOs).37

Established in 1954, CPAFFC presents itself as a “people's organization.” Its English-language website describes it as an NGO. That label belies CPAFFC's oversight and management by China's Ministry of Foreign Affairs and staffing by foreign-affairs cadres.38 The organization is fully a part of the CCP party-state.39 In 2019, Larry Diamond of the Hoover Institution and Orville Schell of the Asia Society described CPAFFC as the “public face of the CCP’s UFWD.”40 As Australian scholar Clive Hamilton put it in 2018 testimony before the Australian Parliament, CPAFFC is “an official organization masquerading as an NGO. CPAFFC forms an integral part of the CCP’s United Front network of covert overseas influence agencies. Its task is to win friends under the banner of people-to-people diplomacy, as the CCP calls it.” Regarding the situation in Australia, Hamilton testified, “Most municipal governments lack even a rudimentary understanding of the CCP’s political goals in these arrangements.”41

Who’s the Boss: CPAFFC’s Institutionalized Influence Campaign

In the United States, CPAFFC serves as the coordinating force behind China’s most prominent mechanisms of state and local influence. Together with the U.S. National Governors Association (NGA), CPAFFC co-convenes the China-U.S. Governors Forum, attended by Xi in 2015. CPAFFC also runs the China-U.S. Sub-National Legislators Cooperation Forum and sister-city relationships as well as more targeted dialogues, platforms, and exchanges.

38. Ibid.
39. CPAFFC has been described as an organ of the United Front Work Department. See: Clive Hamilton and Mareike Ohlberg, “Our twisted sister cities,” The Daily Telegraph (Australia), April 22, 2020. (Accessed via Lexis Nexis)

China-U.S. Governors Forum

In January 2011, then-Secretary of State Hillary Clinton and then-Chinese Foreign Minister Yang Jiechi signed a memorandum of understanding to establish the China-U.S. Governors Forum to serve as “a platform of communication for sub-national leaders of the two countries and advance pragmatic cooperation in trade, investment, energy, environment, culture, and other fields.”42 The forum would be co-convened by the NGA and CPAFFC. Clinton explained:

The Obama administration has made it a priority to strengthen the bonds between the United States and China… Individual U.S. governors have been reaching out to China for years, including at least eight who led trade delegations there in 2010. Chinese provincial leaders have made over 100 visits to America last year alone. There are already 36 sister provinces and states. Each has potential to bring significant benefits to people on both sides… That is why we support the National Governors Association and...
the Chinese People’s Association for Friendship with Foreign Countries in creating the Governor’s Forum [sic], which is designed to help states build their own successful partnerships. Governors will share ideas, connect people and businesses, and then sustain and deepen these connections through regular meetings.43

The vice president of CPAFFC and then-Washington state Governor Christine Gregoire signed a formal agreement on the governors forum one month later, in February 2011, at an NGA meeting.44

The first forum took place in Salt Lake City in July 2011, followed by a dialogue in Beijing in October 2011.45 A governors roundtable was held in Los Angeles during an official visit by then-Vice President Xi Jinping in February 2012.46 The China-U.S. Governors Forum convened again in April 2013 in Tianjin, China;47 September 2015 in Seattle, Washington;48 May 2018 in Chengdu, China;49 and May 2019 in Lexington, Kentucky.50 The Department of State discontinued U.S. participation in October 2020. It declared that CPAFFC had “sought to directly and malignly influence” U.S. state and local leaders in pursuit of China’s global interests.51

In his 2018 article on China’s “parallel diplomacy” with California’s governor, Liu Danning of the Party School of the Jiangsu Provincial Committee of the CCP described the China-U.S. Governors Forum “as a multilateral platform which has achieved rapid expansion in the scale of exchanges.”52 Covering the 2019 forum meeting in Lexington, Xinhua News explained: “In the context of the complex relationship between the two countries, it is particularly important to strengthen exchanges and cooperation at the local level.”53 An advertisement for that 2019 forum meeting on the website of the China General Chamber of Commerce, one of the

conference’s sponsors, described it as an “exclusive deal-making opportunity.”

Documentation of the forum is inconsistent. There is no official website or list of attendees. C-SPAN covered the inaugural 2011 event but no others. An agenda for the 2019 edition is available on the website of the China General Chamber of Commerce. No equivalent appears to exist for earlier years.

What press coverage does exist makes it clear that the forum prioritizes economic concerns and ties. Governor Christine Gregoire of Washington state, chair of the NGA, launched the inaugural 2011 forum on the subject of trade and investment. “Our economies have become interdependent,” she explained. A Xinhua News account of the 2019 forum in Kentucky stated in a headline, “Governors compete for investment at China-U.S. Governors’ Forum.” The article quotes a speech from Cyrus Habib, lieutenant governor of Washington state, in which he said that “the key [to Washington state’s success] is international relationships… We are the number one source of U.S. imports to China. Our relationship with China is therefore absolutely central to the success that we have had economically.” The 2019 forum led to a series of commercial agreements, including the launch of a joint venture engaged in magnesium trade.

“When one side wins, the other side wins,” said then-Kentucky Governor Matthew Bevin in his concluding remarks at the 2019 forum. “When China is strong, it is good for America. When America is strong, it is good for China.”

Ten years of precedent have provided some metrics for assessing Bevin’s claim. Roundups in China Daily of deals signed at the inaugural 2011 forum in Salt Lake City focus, in particular, on a series of agreements relevant to the solar supply chain. The Wuhu Economic and Technological Development Zone in Anhui International Cooperation Forum. See: China General Chamber of Commerce, Press Release, “International Cooperation Forum at 2018 NGA Summer Meeting in New Mexico,” July 24, 2018. (https://www.cgccusa.org/en/international-cooperation-forum-at-2018-nga-summer-meeting-in-new-mexico). Inaugurated in 2017 and held during the NGA’s summer meeting, the International Cooperation Forum brings together Chinese CEOs and investors, U.S. governors, and other business executives to, as the CGCC puts it, “discuss international cooperation at the sub-national level.” Then-Utah Governor Gary Herbert and then-Colorado Governor John Hickenlooper spoke at the 2018 event, as did executives from CGCC member companies Bank of China USA and China Investment Corporation. North Dakota Governor Doug Burgum and Arkansas Governor Asa Hutchinson attended. In his keynote address at the event, Zhang Ping, the consul general from the PRC Consulate General in Los Angeles, urged the attendees to use subnational cooperation to return stability to U.S.-China economic ties: “We need to promote the awareness of the importance of maintaining a sound China-U.S. relationship. China is not a threat, but a partner of cooperation.” The event featured a panel on “Rebuilding a Silk Road to Economic Development,” moderated by Mike Walter of CGTN-America, Qi Bin of China Investment Corporation, and Raymond Qiao of the Bank of China New York. Hickenlooper and Herbert spoke on a separate panel focused on “U.S-China Economic Ties, Growth, Strategies, and Investment Opportunities.”

Province reportedly reached a deal with California-based NuvoSun for a thin-film solar cells project; Asia Silicon (Qinghai) and New Hampshire-based GT Solar agreed to work together; and the chairman of China’s CHINT Group Corporation, a member of the Zhejiang Province delegation, announced plans to “write a billion-dollar check” as part of a partnership with a Missouri-based firm focused on semiconductor- and solar-related wafer products.

63. The GT Solar-Asia Silicon agreement likely referred to GT Solar’s provision of polysilicon production equipment to Asia Silicon.

The precise details of those agreements are unclear. What is clear is that the next year, the U.S. Commerce Department found that both Asia Silicon and the CHINT Group, among other Chinese players, were dumping solar products into the U.S. market. Over the decade since, China has come to monopolize the international solar supply chain, which the United States once led. China has done so in large part thanks to acquisition of expertise and technology from U.S. players, as well as domestic subsidies and preferential policies.
All Over the Map: The Chinese Communist Party’s Subnational Interests in the United States

Attendance Record at the China-U.S. Governors Forum and Related Dialogues, by State

65. The Governors Forum does not publish official attendance lists. This tally is collected from press and official documentation of the events, covering the five official fora as well as the 2011 and 2012 dialogues. The authors believe that this tally is comprehensive for every iteration of the forum and dialogues except the inaugural one, in February 2011. Held during the NGA meeting, that forum reportedly was attended by approximately 20 U.S. governors. See: Special Representative for Global Intergovernmental Affairs Reta Jo Lewis, U.S. Department of State, “Outcome of U.S.-China Governors Forum,” Remarks to the Press, July 19, 2011. (https://2009-2017-fpc.state.gov/168721.htm). Subsequent fora and dialogues featured an average attendance of four U.S. governors or lieutenant governors, with higher attendance at the U.S.-based events than at the China-based ones. Attendance is defined as participation by a state’s governor or lieutenant governor. While not reflected on this map, the Puerto Rico governor participated in February 2011; Guam in October 2011; and the Northern Mariana Islands in October 2011 and February 2012. The U.S. official with the best-known attendance record is Terry Branstad of Iowa, who attended three times as a governor and again in 2018 as U.S. ambassador to China.

China-U.S. Sub-National Legislatures Cooperation Forum

The China-U.S. Governors Forum is not the only CPAFFC forum to target U.S. subnational governments. Xi’s 2015 visit to the United States led to the establishment of the China-U.S. Sub-National Legislatures Cooperation Forum, officially launched in 2016. Co-convened by CPAFFC and the State Legislative Leaders Foundation (SLFF), the forum met annually every year from 2016 to 2019 in Honolulu, Wuhan, Las Vegas, and Shijiazhuang, respectively, as well as in March 2021 in a virtual format. State and provincial officials, as well as private-sector representatives, attended. The November 2019 forum featured speeches by then-U.S. Ambassador to China Terry Branstad; California State Senate Majority Leader Robert Hertzberg; and Alabama Speaker of the House Mac McCutcheon.

Documentation of the Sub-National Legislatures Cooperation Forum is even more sparse than that of the governors forum. However, Xinhua News coverage of the March 2021 virtual event stressed that it “was the first institutional activity of exchanges and cooperation between China and the United States to have resumed after the new U.S. administration...
took office.”\textsuperscript{68} Representatives from seven Chinese provinces and legislators from seven U.S. states attended.\textsuperscript{69} According to Xinhua News, Steven Lakis, the president of the SLFF, declared that “the SLFF will continue to cooperate with the CPAFFC to enhance the dynamic relationship between the U.S. and Chinese people.”\textsuperscript{70}

### Sister Cities

The phrase “sister cities” refers to agreements between cities — or boroughs, towns, prefectures, or regions — designed to promote cultural and commercial ties. The sister-city program began in 1956 and was a brainchild of President Dwight Eisenhower.\textsuperscript{71}

Pairings can, in some cases, mean as little as a sign on the side of the road. However, Beijing has used sister cities as a tool in its international diplomatic efforts.\textsuperscript{72} Xi’s visit to Lincoln High School in Tacoma is emblematic of this. CPAFFC organizes and oversees China’s sister-city relationships: Institutionally speaking, they exist under the umbrella of Beijing’s subnational influence campaign. Today, there are over 250 sister-city partnerships between the United States and China.\textsuperscript{73}

The ramifications of China’s emphasis on sister-cities are difficult to evaluate precisely. The relationships create channels for dialogue, investment, and exchange, which are not necessarily harmful. Yet they open up avenues for Beijing’s political, economic, and scientific and technological influence. Chinese discussions point to this potential: A 2018 headline in the \textit{South China Morning Post} reads, “Sister cities in the West a bulwark for China against worsening U.S. ties.” The article’s sub-headline reads, “Sister-city relationships have their roots in mutual understanding, but offer economic spin-offs too.”\textsuperscript{74}

These are indications, albeit indirect ones, of the political and economic value Beijing may derive from sister-city relationships. The Hoover Institution’s Larry Diamond and the Asia Society’s Orville Schell reported in 2019 that China insists on inserting into sister-city agreements a clause stipulating that corresponding activities be implemented “in accordance with the principles on the establishment of diplomatic relations between the United States of America and the People’s Republic of China.” This clause appears to be a veiled reference to the “One China” principle, which bars diplomatic recognition of Taiwan as a second Chinese state alongside the People’s Republic of China. The clause could be used to limit states’ and cities’ exchanges with Taiwan.\textsuperscript{75}

\end{itemize}
\end{footnotesize}
Building on Chicago’s sister-city partnerships with both Shanghai and Shenyang, then-Mayor Rahm Emanuel and then-PRC Vice Minister of Commerce Wang Chao signed a Gateway Cities Agreement in 2013. That agreement tethered Chicago to Chinese cities — Beijing, Chengdu, Hangzhou, Qingdao, Shanghai, Shenyang, Tianjing, and Wuhan — to facilitate and expand their trade, investment, and communication. The press release covering that agreement noted that it led the Chicago government to establish the position of director for China strategic initiatives to “further develop the City’s relationship with China.”

Detroit, Michigan, has a sister-city relationship with Chongqing, the site of Ford Motor Company’s largest manufacturing base outside of Detroit.

In May 2018, the state of Massachusetts and province of Guangdong held an event in Boston to celebrate their sister-city relationship. “We are pleased in Massachusetts to have your companies like the China Railroad Rolling Stock Corp (CRRC) building our train cars at this moment,” declared Massachusetts Lieutenant Governor Karyn Polito, according to China Daily. The next year, ties between CRRC and China’s military and government prompted the United States to pass a law barring use of federal funds to purchase the company’s buses and rail cars. In June 2020, the Department of Defense identified CRRC Corporation Limited as a Communist Chinese military company, in accordance with requirements of the National Defense Authorization Act for Fiscal Year 1999.
Other Players

The State Department has described the United Front Work Department as “an organ tasked with co-opting and neutralizing threats to the party’s rule and spreading its influence and propaganda overseas.”81 United Front subnational influence efforts in the United States extend beyond CPAFFC programming. The UFWD also oversees China’s much-discussed international network of Confucius Institutes, though they are ostensibly funded and organized by China’s Ministry of Education.82 Confucius Institutes run educational exchanges and programming designed to disseminate favorable narratives about China and are generally housed at colleges and universities.83

Beyond the Confucius Institutes, there are also subtler, less discussed, and potentially more widespread networks of United Front influence in the United States. Media is a major focus.

Specifically, Beijing wields an ecosystem of Chinese-language media outlets with close ties to the CCP. Every two years since 2001, the People’s Republic of China’s state-owned China News Service has hosted the World Chinese Media Forum in China.84 China News Service belongs to the UFWD. As China News Service puts it, the World Chinese Media Forum is the “top summit” for overseas Chinese media, a chance for them to “come home.”85 Delegates take guided visits around China, meet with government officials, and hold structured discussions. Past themes have included “The Belt and Road Initiative and the New Development of Chinese Media to Integrating the World” and “Witnessing the Times: Chinese Media’s ‘China Story.’” More than 400 overseas media representatives, including more than 60 from outlets based in the United States, attended the last forum in 2019.86

85. “背景资料：世界华文传媒论坛 [Background Information: World Media Summit],” China News (China), August 23, 2007. At the sixth meeting, those present published a “Chongqing Declaration” on overseas Chinese media in the international narrative system. They declared that “the global Chinese media are working together” to build a new international discourse, and that “Chinese-language media across the five continents are not only an indispensable part of local multiculturalism, but also ineparable from the rare development opportunities of Chinese culture.” See: “世界华文传媒论坛发表《重庆宣言》[World Chinese Media Forum Publishes ‘Chongqing Declaration’],” China News Network (China), September 18, 2011.

Some of these U.S.-based outlets are simply foreign affiliates of Chinese state media. For example, the U.S. Overseas Chinese Network is a branch of the Overseas Chinese Network sponsored by Huasheng News, a propaganda agency under the authority of the Overseas Chinese Affairs Office under the UFWD. The budget of the Overseas Chinese Affairs Office notes that it is in charge of propaganda related to the Chinese diaspora.

---

87. This analysis defines “outlets” as U.S.-based media outlets that sent delegates to the World Chinese Media Forum in 2019. It does not include non-U.S.-headquartered outlets that might operate in the United States. State affiliation is determined by the location of the outlet’s stations for radio and television operations, and by outlet headquarters for print and online operations. The one exception is print operations serving the Washington, DC-Maryland-Virginia area. These operations are coded as present in all three.

88. That said, these outlets are willing to participate in a conference backed by the United Front, oriented clearly around China’s creation of a global media network, and featuring visits by government officials. This suggests a certain proclivity. That proclivity is also evident in their reporting, which features a heavy bias toward Beijing.

Other outlets, such as the Phoenix Media Group, have less overt ties to the Chinese government. Multiple Phoenix representatives attended the 2019 World Chinese Media Forum, including the CEO of Hong Kong-based Phoenix Television and the chief editor of one of its U.S. outlets, the Phoenix Times. The People’s Republic of China partially owns Phoenix Television. A former director of Phoenix Television testified in a 2019 U.S. Federal Communications Commission filing that the station’s programming was “subject to the dictates of the leadership of the Central Communist Propaganda Department, Central Communist Overseas Propaganda Office, and the Ministry of Foreign Affairs.”

In addition to hosting its biennial forum, China News Service works directly with many of the organizations in attendance as well as with other Chinese-language outlets operating in the United States. As early as 2006, the service reported it had “deepened or established cooperative relations with dozens of Chinese-language media in the United States.” The outlets it listed included the American Chinese Business Daily, the New World Times, Meilong.com, Washington News, and Asian American News in Washington, DC; the China Star Media Group, the China Times, the Chicago Chinese Tribune, Chicago Guangzhou Net, and Chicago Healthy Life in Chicago; U.S.-China Evening News, Dallas News, and the Southern Newspaper Communication Group in Dallas; and China Times, the U.S.-China Messenger, and Mingqiao Sports in Houston.

In addition to promoting Beijing-friendly narratives, the outlets that attend the biennial forum may seek to cultivate ties with American elected officials via endorsements or favorable coverage. These are typical activities for U.S. media outlets but may present a concern if Beijing helps set the agenda. For example, the Colorado-based Chinese American Post supported former Representative Mike Coffman (R-CO) from the time he was state treasurer through to his election to Congress. In 2017, the paper published a feature story on Coffman’s visit to a Confucius Institute classroom.

The activities of the U.S.-China Times, whose editor-in-chief attended the 2019 World Chinese Media Forum, illustrate the potential for cooperation with PRC entities that seek to influence the private sector. The U.S.-China Times signed a strategic cooperation agreement with both the People’s Republic of China’s investment promotion association, the America-China Investment Promotion Association (ACIP), and the American Chinese Expert Association in November 2018 to host a joint summit on exchanges with the United States.

ACIP is a Los Angeles-headquartered nonprofit with branches in China as well as in Europe. ACIP describes itself as “the most influential platform for promoting
the exchange and interaction of financial capital, industrial innovation, education, science, culture and health, and tourism across Europe, the United States, and China.”96 Its mission is “global integration and sharing; calmly grasping the right to survive, control, and dominate the new industrial revolution.”97 In 2013, ACIP’s chairman, Zhang Jiaohao, founded and chaired the Anhui Province Investment Promotion Association, supported by the Anhui Provincial Government and led by a team of government officials. Zhang also worked as a consultant for a number of Chinese government entities. ACIP has partnered with various Chinese government entities that fall under the United Front umbrella, including the All-China Federation of Returned Overseas Chinese, as well as security companies supporting China’s national defense system.98

The American Chinese Expert Association is also a California-registered nonprofit. It, too, has branches in China and cooperates with Chinese government entities, including players within the United Front system.99

Other, non-UFWD Chinese institutions in the United States also leverage subnational relationships to facilitate access to U.S. resources. The Chinese Association for Science and Technology, USA (CAST-USA) is a prime case. CAST-USA is the U.S.-based chapter of the China Association for Science and Technology (CAST), a professional organization for Chinese scientists. CAST is under the CCP’s authority and represented at the Chinese People’s Political Consultative Conference (CPPCC).100 CAST-USA is incorporated as a nonprofit organization and has more than a dozen individually registered chapters in the United States, including in Washington, DC, New York, and Silicon Valley. CAST-USA also has at least 11 so-called “liaison offices” in China.101

CAST-USA’s activities are designed to advance China’s technological goals. The organization hosts a regular convention and other events in the United States that provide a forum for interaction among Chinese corporate, research, and government entities and their U.S. counterparts. CAST-USA’s 25th convention, in 2017, took place in New York City at Columbia University, co-organized with New York City Council member Ydanis Rodriguez. Governors Andrew Cuomo of New York and Tom Wolf of Pennsylvania both sent representatives. Congressman Adriano Espaillat (D-NY) attended, as did New York State Assemblywoman Carmen De La Rosa. Then-Senate Minority Leader Charles Schumer (D-NY) sent a congratulatory letter. The Science and Technology Counselor from the Consulate General of China in New York delivered remarks. So did a number

of Chinese commercial representatives. There were no overt indications that CAST-USA is an extension of the CCP.

CAST-USA describes itself as “a ‘bridge’ between the United States and China for both personnel and information exchanges, and for cooperation in science and technology, economic, trade and other areas.” CAST-USA aims to establish “cooperative relations with American corporations, enterprises, institutions and organizations, to create favorable conditions and environment for cooperation between the American and Chinese people in seeking funds, market development, technology transfer and investment opportunities between the United States and China.”

In June 2018, a 12-person delegation from CAST-USA visited CAST’s international department in China and met with CAST Vice Minister Zhang Sen. The president of CAST-USA, Pan Xinghua, thanked “CAST for its continuous support to CAST-USA” and declared that “CAST-USA hopes to strengthen the substantive exchanges and work docking between the associations and establish a continuous and long-term working mechanism.” The two sides discussed overseas talent recruitment, then signed a strategic cooperation agreement. Two months earlier, China’s minister of science and technology, Wang Zhigang, met with the president-elect of CAST-USA, Jiao Dequan, in Beijing. They discussed foreign technological cooperation and talent exchanges, and Wang emphasized the “positive role played by CAST-USA in promoting Sino-U.S. scientific and innovation competition.” Jiao promised to “promote the exchange and cooperation of scientific and technological talents between the two countries.”

**Where the Money Goes: Assessing State-Level Economic Exposure**

Beijing’s subnational campaign rests on the premise that influence derives not only from personal relationships but also from economic dependence on China. In his 2017 article, Jia Zhongzheng of the Chinese Academy of Sciences asserted that “the degree of dependence on China will largely determine a state’s attitude: States that have more exports to China and rely more on Chinese investment are more pro-China.” In his 2015 Seattle address, Xi likewise hinted at the role of economics in shaping political attitudes. “I know as governors, you are most concerned about employment,” he told his audience.

Chinese analysts emphasize trade and employment, focusing on the extent to which a given subnational economy relies on trade with China, as well as the extent to which Chinese investment might foster employment in the given state. This suggests that Beijing assesses

---

vulnerability to subnational influence campaigns using metrics such as China’s share of a state’s trade or foreign investment. The maps below show the degree to which different U.S. states might rely on Chinese markets and investment, based on their trade volume and corporate relationships. These indicators do not show causality or even correlation with attitudes toward China. They are intended to represent potential state vulnerabilities and the levers of influence that China may be poised to wield.

Leaders from the Beijing-based Center for China and Globalization explained in 2017: “The demand for foreign capital from China drives close connections with U.S. states. Chinese entrepreneurs who are willing to invest in state governments are generally treated as guests by state politicians and officials, regardless of their party or ruling philosophy.”

They also argued that state and local officials are more malleable and readily influenced than their national counterparts.

Xinhua News illustrated the value of dependence for Beijing in a 2019 series of vignettes about local reactions to President Donald Trump’s trade policy:

Oregon Governor Kate Brown said that for Oregon, which relies on trade with China, national tensions have had a “chilling effect” on [Oregon’s] exports to China, causing a serious blow to the state’s agriculture… Los Angeles Deputy Mayor Nina Hachigian stated that trade with China accounts

111. Ibid.
for 60 percent of the trade volume of Los Angeles. Affected by economic and trade frictions, the Port of Los Angeles’ exports to China have fallen sharply, and uncertainty has also brought challenges to port operations. She said that California’s exports of fruits, nuts, and wine products to China have suffered heavy losses, Chinese companies’ investment has declined, and Los Angeles’ tourism industry has also suffered.113

After Los Angeles, the Xinhua account turns to Missouri, followed by Kentucky, Louisiana (“We are still open for business”); Idaho (“Still very interested in China”); and Washington state (“Lieutenant Governor Cyrus Habib said the relationship with China is the most important secret of Washington State’s success”).114

Conclusion: Documenting and Responding to China’s Influence Campaign

The U.S. government is starting to acknowledge Beijing’s bid for subnational influence. In August 2020, the State Department designated the Confucius Institutes’ head office in the United States as a PRC foreign mission, a status requiring it “to regularly provide information to the State Department about PRC citizen personnel, recruiting, funding, and operations in the United States.”115 Two months later, the State Department issued another foreign-mission designation, this time targeting six Chinese-domiciled media companies operating in the United States: Yicai Global, the Jiefang Daily, Xinmin Evening News, the Beijing Review, the Economic Daily, and Social Sciences in China Press.116 Days later, then-Secretary of State Mike Pompeo discontinued

114. Ibid
participation in the memorandum of understanding undergirding the China-U.S. Governors Forum.117

These measures signaled Washington’s intention to resist Chinese influence efforts. However, the effort was haphazard: While the United States pulled out of the governors forum, the China-U.S. Sub-National Legislatures Cooperation Forum was not affected. Despite designating six media outlets as foreign missions, the State Department did not address the full ecosystem of Chinese-language media outlets that attend the China News Service’s World Chinese Media Forum. At least for now, Beijing benefits from an asymmetry: Its centralized control of subnational influence efforts facilitates coordinated action, while American responses are scattershot. The U.S. government must target the core of the system rather than singling out individual offshoots in an ad hoc fashion.

The first step is to build a strategic framework for identifying both the organizing nodes of China’s subnational influence campaign and the vulnerabilities of state and local governments. This report lays the foundation for such a framework by profiling the strategic goals behind China’s state and local influence efforts, the bureaucracies that implement those efforts, the specific tools and mechanisms Beijing employs, and potential indicators of vulnerability at the state and local level.

This framework should be paired with parallel documentation efforts that aggregate intelligence information on Chinese influence efforts — and their outcomes — to support U.S. defensive measures. The effort should be coordinated and supported by the intelligence community and shared with state and local officials in a structured and recurring fashion.

Beijing is adept at using soft-power propaganda tools to shape American narratives. Beijing’s vehicles for subnational influence — whether Confucius Institutes or CPAFFC dialogues — operate in plain sight. Yet their effectiveness depends greatly on concealing the coordinating role of the CCP and key party organs, such as the Central UFWD. By exposing purportedly benign engagement mechanisms as components of a CCP-led campaign, U.S. messaging could turn those propaganda efforts into a liability for Beijing while warning off U.S. participants. Americans are increasingly familiar with the CCP’s military aggression, economic exploitation, cyber threats, and grave human rights violations. It is time for them to recognize that the CCP also shapes opinion within the United States.

The federal government should pursue the following measures to address this challenge:

- First, Congress should support the development of an information-collection program focused exclusively on analyzing the Chinese subnational influence apparatus and the ways in which it reaches into the United States. Such an effort could be housed within the Department of Homeland Security or the Department of Justice (DOJ). The Consolidated Appropriations Act of 2021 tasked the Federal Bureau of Investigation (FBI) with increasing efforts to combat Chinese influence efforts in the United States and to strengthen civil liberties protections.118 FBI progress spurred by that legislation may provide a foundation on which to build.

- The findings of this collection program should be shared broadly across the interagency.119 Counterintelligence, homeland security, and law enforcement actors with domestic security mandates should have access to the same information that informs China policy. Existing efforts, such as those led by the National Counterintelligence and Security Center in the Office of the Director of National Intelligence, should share their findings

---

not only with the appropriate oversight committees in Congress but also with relevant state and local authorities.

- The Foreign Agents Registration Act (FARA) is another tool that federal authorities should leverage at the subnational level. As a first step, the FARA registration and oversight apparatus at DOJ could launch a series of pilot engagements with state and local leaders. These engagements could socialize the legal requirements that FARA imposes on foreign agents and should emphasize the legal and reputational risks that businesses may encounter in their operational, business, and lobbying efforts.

- The federal government should examine whether existing mechanisms for monitoring investment-driven foreign influence, such as the Committee on Foreign Investment in the United States, sufficiently account for the impact of investments in technology, infrastructure, and data at the subnational level.

- The EB-5 Immigrant Investor Program, which provides green cards to foreign investors, should vastly improve its due diligence for applicants with ties to the CCP. Key findings from these due diligence efforts should feed into the subnational influence documentation program prescribed above.

Federal investments and information sharing are necessary but not sufficient to address the CCP’s subnational influence campaigns. CCP strategy exploits the decentralized nature of American government, so state and local leaders and organizations must play an integral role in addressing this challenge. To that end, state and local governments should:

- Recognize the long-run costs associated with the short-term economic rewards that so often drive unbridled engagement with the Chinese influence apparatus.

- Develop a framework for monitoring the national security risks posed by subnational engagement with actors connected to the Chinese government, the CCP, and the Chinese military. State and local governments should factor these risks into their trade and investment promotion programming. Governors should lead this effort.

- State registries of foreign businesses would benefit from additional information-collection requirements and consistency. State-level investment mechanisms may also benefit from developing restrictions on the eligibility of state-owned and state-backed actors, similar to the restrictions that apply to Federal Transit Administration funding pursuant to the National Defense Authorization Act for Fiscal Year 2020. 120

- Trade and investment promotion activities should carry due diligence requirements to assess the potential for malign Chinese influence.

- Delegations that visit China for business development purposes or that host visiting Chinese groups should receive briefings on malign influence and counterintelligence risks from DOJ liaisons. American delegations should also be debriefed to update monitoring and shape best practices.

- Fora that convene state and local leaders, such as the National Governors Association, should promulgate best practices and informational resources that empower states and localities to tailor counter-influence programs.

Beijing has pursued a systematic, long-term approach to building up a set of institutions capable of influencing at the subnational level in the United States. American government is decentralized by design, yet only by working together can federal, state, and local authorities counter CCP influence. There is no time to waste.

Appendix

The Minzhi International Research Institute is a Beijing-based think tank launched in September 2016. It focuses on globalization, Sino-U.S. trade, Hong Kong, and Taiwan. It is funded by the Democratic National Construction Association, one of China’s eight political parties. Minzhi’s founder and chairman, Chen Mingjian, describes the think tank as a mechanism for “the globalization of the United Front.” Minzhi’s research team has close ties with authorities within the Chinese system. The team includes Tu Xinquan, dean of the China WTO Research Institute; Fan Jishe of the American Institute of the Chinese Academy of Social Sciences; Jia Qingguo of the Standing Committee of the Chinese People’s Political Consultative Conference; Li Mingde, director of the Intellectual Property Center of the Chinese Academy of Social Sciences; and Li Yong, deputy director of the Expert Committee of the China Society for International Trade. The team also includes Zhu Xiangyuan, vice chairman of the 9th and 10th Beijing CPPCCs and member of the Standing Committee of the 9th and 10th National People’s Congresses.

Tsinghua University is among China’s most prestigious universities. Xi’s alma mater, Tsinghua is consistently ranked as the top university in China. It partners with UC Berkeley in running the Tsinghua-Berkeley Shenzhen Institute and hosts the Schwarzman Scholars program. Tsinghua also has partnerships with the University of Michigan, MIT, UC Davis, Oak Ridge National Laboratory, General Motors, Ford, Chrysler, Dow Chemical, Microsoft, the Lego Foundation, and Intel, among others.

The list of governor attitudes outlined in the Minzhi-Tsinghua report are as follows.

121. Membership in the Democratic National Construction Association does not preclude membership in the CCP. For example, Xhu Xiangyuan, one of the experts at Minzhi, is described on the think tank’s website as a member of both the China Democratic National Construction Association and the CCP. The website also says he served as vice chairman of the 9th and 10th Beijing CPPCCs as well as a member of the Standing Committee of the 9th and 10th National People’s Congress.

About the Authors

Emily de La Bruyère is a senior fellow at FDD focused on China policy. Her work focuses on China’s technology ambitions, military-civil fusion strategy, and human rights abuses and their implications for U.S. economic and national security. She uses primary-source, Chinese-language materials to provide decision makers with insight on geopolitical, technological, and economic changes. In addition to her work at FDD, she is a co-founder of Horizon Advisory, a geopolitical consulting firm.

Nathan Picarsic is a senior fellow at FDD focused on China policy. He has closely monitored trends in Chinese strategy and investment across key economic and military balance areas for over a decade and is a leading expert on competitive strategies and approaches to long-term peacetime competition. His work has contributed to broader recognition of the Chinese Communist Party’s military-civil fusion strategy and human rights abuses. He is a co-founder of Horizon Advisory, a geopolitical consulting firm.

About the Foundation for Defense of Democracies

FDD is a Washington, DC-based, nonpartisan policy institute focusing on foreign policy and national security. For more information, please visit www.fdd.org.

FDD’s Center on Economic and Financial Power

FDD’s Center on Economic and Financial Power (CEFP) studies national economic security, with a focus on how the United States can leverage its economic and financial power to achieve its national security objectives. CEFP promotes greater understanding of how the U.S. government can best employ its economic and financial authorities to counter its adversaries.

FDD’s Center on Military and Political Power

FDD’s Center on Military and Political Power (CMPP) promotes understanding of the defense strategies, policies, and capabilities necessary to deter and defeat threats to the freedom, security, and prosperity of Americans and our allies, by providing rigorous, timely, and relevant research and analysis.

FDD’s Barish Center for Media Integrity

FDD’s Barish Center for Media Integrity addresses the national security threats posed by misinformation, disinformation campaigns, and influence operations waged by foreign adversaries against the United States and allied democracies.

FDD’s China Program

Leveraging the full scope of economic, financial, military, political, cyber, and technology tools, FDD’s China Program exposes and challenges the wide-ranging threats posed by the Chinese Communist Party. FDD’s China team includes experts with Chinese-language skills, data-driven mining capabilities to examine Chinese-language sources, and experience in government, intelligence, the military, and the technology sector.

FDD values diversity of opinion and the independent views of its scholars, fellows, and board members. The views of the authors do not necessarily reflect those of FDD, its staff, or its advisors.
